

# DETECTION DIAGNOSIS TREATMENT

## 10 REASONS TO STUDY MEDICAL RADIATIONS AT RMIT UNIVERSITY

01 » RMIT was the first tertiary institution in Australia to offer Medical Radiations as a degree program.

---

02 » It is the only undergraduate professional accredited program in Victoria that can be completed in three years.

---

03 » It provides the opportunity to progress to a paid Intern/Professional Development year after successful completion of the three-year degree, making you eligible for full professional accreditation by the Australian and New Zealand Society for Nuclear Medicine, or Australian Institute of Radiography.

---

04 » RMIT is the only university in Victoria offering all three professional streams (Medical Imaging–Radiography, Nuclear Medicine and Radiation Therapy) at an undergraduate level.

---

05 » You'll spend 22 weeks of the three-year degree in supervised clinical practice, making you job-ready upon graduation.

---

06 » The program is taught by experienced professionals and sessional staff who have current industry and cutting-edge research experience.

---

07 » You'll study in up-to-date learning and teaching facilities with modern state-of-the-art Medical Radiations and IT facilities.

---

08 » Well established links are formed with clinical providers who have an in-depth knowledge of student requirements.

---

09 » The program is technically advanced and provides skills for interacting with people in the health sector.

---

10 » There is a better than 90% employment rate for graduates.
