Cloaking architecture in verdant green landscapes has been the folly of designers over the last century. Only in our generation has its potential been extensively explored but not yet fully realized. Students will be asked to explore the full potential of this landscape typology.

This studio will be based around ‘Growing Up’ - The Blueprint to Green Roof Melbourne, a Green Roof Design Competition. The competition calls for landscape designs for the roofs of 5 buildings in Melbourne’s CBD. Students will work in teams to design and submit competition entries for some or all of the buildings. Teams will undertake research on green roofs, their design, structure and purpose. The competition conveners intend to build the winning entries.
