Logistics Development and tendency in China

Abstract

Keywords: Concept of Modern Logistics,
In 1980s, the concept of modern logistics came into China from Japan and the U.S.A. Since then, logistics has gradually taken people’s attention and become one of the popular topics among academics and industries. This paper is going to track back the history of China’s logistics development, assess its applied policy and training system of logistics human resources, as well as forecast its development tendency with consideration of the events like China’s membership of WTO, 2008’s Olympic Game in Beijing, 2010’s EXPRO in Shanghai and West Development Strategy of China.
