Course Description:
The aim of this course is to consolidate your understanding of the design process. You will explore the application of 3D modelling and construction skills and will have opportunities to focus project outcomes on specific design areas of interest.

Objectives/Learning Outcomes/Capability Development:
Learning outcomes:
At successful completion of this course you should be able to:
1. Further develop your understanding of principles and elements of design theory through application in design projects.
2. Choose and apply appropriate techniques for the presentation of your concepts and designs.
3. Further develop your understanding of safe and appropriate studio practice.
4. Develop a project brief.
5. Understand the design process as it relates to a range of design industries.
6. Use a range of approaches to review your own concepts.

Overview of Learning Activities:
Project work will incrementally build on knowledge gained from earlier projects so that projects increase in complexity over time. This will reinforce knowledge and skills introduced in earlier projects.

Practical demonstration of creative ability and understanding of learning outcomes will be developed through exercises and projects. Project work and the workbook will be supervised and assessed progressively in a studio environment.

Overview of Learning Resources:
You will be supported in your studies with online resources via myRMIT. This portal gives you access to important announcements, staff contact details, the teaching schedule, assessment timelines and a variety of important teaching and learning materials. You can access online learning tools and content for your program and...

<tr>
<th>Overview of Assessment</th>
<th>You will be assessed on the above learning outcomes. Assessment tasks are ongoing throughout the semester and may include your project work in both 2 and 3D, exercises completed in your visual diaries and verbal presentations.</th>
